SKILLS

- Go
- Python
- Javascript, Typescript
- Kafka
- Docker
- Git
- SQL, NoSQL
- Observability and metrics
- Ability to work in a team
- Project management (Jira)
- Knowledge management systems (Obsidian)

LANGUAGES

- Slovene
- English

PROFILE

I'm a backend-focused software engineer with a strong foundation in full-stack development.

Experienced with distributed systems, as well as in designing, developing, and managing small to mid-scale systems with a focus on performance, maintainability, and clarity.

I am minimalistic and structured, whether at work or daily life, regularly applying the same principles to personal systems like finance, notes, and task management.

WORK EXPERIENCE

Bitstamp

March 2026 - Present

Software engineer

- Part of the Prime team, building products and infrastructure for institutional clients.
- Micro-service development in Go and Python.

IMS Merilni sistemi

October 2022 - February 2026

Software engineer

- Full-stack development using Laravel, Go and Python.
- Designed, implemented, and maintained systems to support integration across internal tools and third-party platforms.
- Experience with various facets of machine learning, with a focus on audio classification and agentic workloads.

IMS Merilni sistemi

March 2022 - September 2022

Intern

- Designed and implemented an internal management system to support sound calibration workflows.

Work abroad

May 2017 - June 2017

Student

- I worked abroad as part of the Erasmus programme.
- My main tasks were programming and maintenance/repair of computer equipment.

EDUCATION

Bachelor of Electrical Engineering

2019 - 2023

University of Ljubljana, Faculty of Electrical Engineering

Computer engineer

2014 - 2018

Vegova - Upper Secondary School of Electrical and Computer Engineering and Technical Gymnasium

PROJECTS

A MIX OF PROFESSIONAL AND PERSONAL WORK

OTHER PROJECTS

SOUND CALIBRATION MANAGEMENT SYSTEM

- Laravel, Vue, MySQL
- Customer management

LICENSING SERVER

- Go, Vue, MongoDB
- Web security

NETWORK INTRUSION DETECTION SYSTEM

- Deep learning
- Thesis

BLOCKCHAIN WALLET ANALYZER

- Python
- Solana

WEB CRAWLERS

- Python
- Continuous updates

WEALTH-WARDEN

This is a solo project inspired by my own Excel-based financial tracking template. The goal is to provide a seamless and intuitive platform for managing personal finances - covering income, expenses, investments, and financial goals - with a strong emphasis on data integrity and insightful presentation.

The project is a web app, because it was designed to replace my own spreadsheet, so it needs to provide maximum functionality, while being accessible. The server is built in Go, and the client is built in Vue.

ATHLETE BIOMETRIC DATA PLATFORM

Helped co-develop a comprehensive system to centralize sport measurement data using Polar devices, for athletes. The project didn't make it, but the experience was invaluable.

The project included: A Go server with integrated observability, an Angular web interface, and an Android app integrating with PolarSDK for real-time biometric data capture from Polar devices.

NOISEGUARD SOUND CLASSIFICATION

This project integrates into NoiseGuard's ecosystem, offering sound classification for provided recordings.

It's a FastAPI-based audio processing pipeline that segments .mp3 recordings using soundscape percentile metadata and classifies them with multiple ML models. I developed the backend, a priority queue, and structured logging. I also re-trained a classification model to improve performance on urban soundscapes, which represent the majority of NoiseGuard's data.

PERSONAL AI AGENT ASSISTANT

I designed and developed an AI-powered assistant to streamline daily operations within a company.

The assistant transcribes meetings, processes product and company-related information, and builds a centralized knowledge base. Leveraging this knowledge, it can summarize meetings, generate action plans, analyse documents, and keep team members informed, minimizing the need for constant meeting attendance.
